DESCRIPTORS: \*Astronomy, \*Ranges (Distance), \*Range  
finding, Earth, Planets, Measurement, Triangulation,  
Doppler systems, Gravimeters, Radar equipment, Sun.

The basic principles and results of the determination by  
the trigonometric, dynamic, spectroscopic and radar  
methods of the astronomical unit of length and the solar  
parallax are discussed. Some of the sources of un-  
certainty of these determinations are pointed out and  
possible errors evaluated. Future possibilities are  
considered. (Author)
